Training and competition on  
their highest level

For the best of the world  
Perfect for training and competition  
FILA-certified

*Foeldeak – Innovation by Tradition*

## Foeldeak WrestlingMat professional

Sure, wrestling is an extremely demanding sport that requires a lot of force, speed, tactics, strategy, and the ability to take stick. Full physical exertion is demanded here.

What is happening on 12 x 12 meters is more than meets the eye. All the more, the right basis, the right sports mat is very important. Because apart from all force one thing is extremely important: the physical health of the athletes. The FILA-certified foeldeak S class with the foeldeak S6 or the super light-weight foeldeak SL meet the perfect requirements and are the optimum basis, even for fights on the highest level.

The foeldeak S6 is made of 6 cm thick robust compound foam coated on top and on the lateral sides with artificial leather; the bottom surface features antislip material or carpet felt. On this mat, the Velcro cover fits like a glove. The 1 x 2 m slabs weigh no less than 19 kg. So they are like set in stone, no matter what happens.

The foeldeak SL is one of the most light-weight of its category and is downright the top mat of the Foeldeak range of products. The extremely light, 6 cm thick core made of polyethylene and PUR sandwich structure, is of course also - like the S6 - coated all around with artificial leather and with carpet felt or antislip material on its bottom surface. Weighing only 8 kg per 1 x 2 m mat element and given the same stability and sturdiness, this mat is the ne plus ultra of all wrestling mats and can be absolutely recommended. It is not for nothing that Foeldeak supplies since decades apart from the leagues nearly all national and international major events, such as Olympic Games or World Championships, with its excellent sports mats.

Due to the individually easily positioned and absolutely even elements, the competition or training surface is rapidly installed and made ready for the fight in no time with the bi-laterally PVC-coated cover made of 100 % polyester. The elements remain stable in place either due to the traditional flap-down edge of the novel, durable Velcro closure, and wrinkles or stumble gaps are a thing of the past. Foeldeak covers are seamlessly welded and don't have to be glued. They are pollutant and solvent-free, can be kept hygienically clean without effort and have a very long life.

Even with hard fights and heavyweights such as Olympic champion Mirko Englich!
